

Future plugfests

- What?
 - Define in time scenarios and use cases
 - Also sensors and observations
 - Formalised versus informal ad hoc
 - “Plugfest are the new IEs” - more agile
 - Engineering Report summarise results
 - Learn from UK plugfest – presentation about plugfest
 - Remote versus local
 - Local participants allow better/faster response
 - No mixture – either all local or remote
 - Demonstrations of exiting systems making use of OGC services (WMS and WCS)
- When?
 - Could be done in separate sprints (some months later)
 - More often for new standard developments (such as WCS extension)
- Who?
 - Beyond Europe – OGC can help to advertise
 - Non-meteorologists - very important
 - Include their services in definition of use cases
 - Open Source community (implementers, funders, OSGEO, FOSS4G)
- Does it involve money? How much?

Concrete event at ECMWF

- Where: ECMWF
- When: 2nd October 2015
- Scenarios: are their production level?
 - Classical forecaster use case
 - Local decision support scenario (mobile)
- What: WMS 1.3 Met Ocean BP
WCS 2.0 MetOcean Extensions?
